SAP on Microsoft Azure

Innovation in the Microsoft Cloud

Protiviti's SAP on Microsoft Azure Services provides a beginning-to-end, streamlined plan for migrating to the cloud and beyond. From latency considerations to optimization and security, we help clients maneuver the journey to successful cloud utilization when working with SAP on Azure. Our Azure migration accelerators will optimize your organization's processes and get your SAP solutions to the cloud quickly and securely.

Determining the SAP on Azure Cloud strategy that's right for your organization begins by examining several key questions:

- What SAP application(s) do I move to Azure first?
- How secure will my information be in the cloud?
- Do I need managed services for my cloud environment?
- Can my team support our cloud environment?
- What are the overall cost savings of moving to SAP on Azure?
- Can I take advantage of SAP on Azure if our organization is not an SAP shop?

SAP & Microsoft
Gold Partners

Our Solution

Microsoft Azure provides the trusted path to enterprise-ready innovation — bringing the intelligence, security and reliability of Azure to SAP applications. Protiviti's global team of certified SAP and Microsoft experts can provide the right SAP on Azure Solutions for business process optimization, data and analytics, security and privacy, and risk and compliance.

SAP Solutions

Deploy mission critical SAP systems on the Azure cloud platform including:

- SAP ECC, S/4HANA, CFIN
- SAP BW/4HANA® and SAP BW on HANA
- SAP HANA® Enterprise
- SAP Governance, Risk and Compliance
- SAP Analytics
- SAP Enterprise Information Management

Custom Solutions

Create a cloud environment built just for your unique needs, from multi-server VPCs (Virtual Private Cloud) to pre-configured SAP infrastructure components for rapid solution deployment:

- Reliable hosting environment
- Flexible scalability
- On-demand infrastructure

INNOVATE. TRANSFORM. SUCCEED.

SAP on Azure Accelerators

Protiviti's SAP on Microsoft Azure Accelerators are pre-built SAP on Azure Solutions. These accelerators are designed with a focus on Data, Analytics and Security and can be customized to meet your needs.

Insights Views

About InsightViews: Protiviti InsightViews are pre-constructed auto-generated reports that pull data from multiple sources into Azure to support best-practice reporting from SAP. InsightViews, an Analytics Quick Start for SAP Customers, can jump-start your financial transformation by developing an analytics foundation that supports future growth. With a rich library of optimized views, Protiviti's InsightViews are the culmination of hundreds implementations and thousands of hours of development.
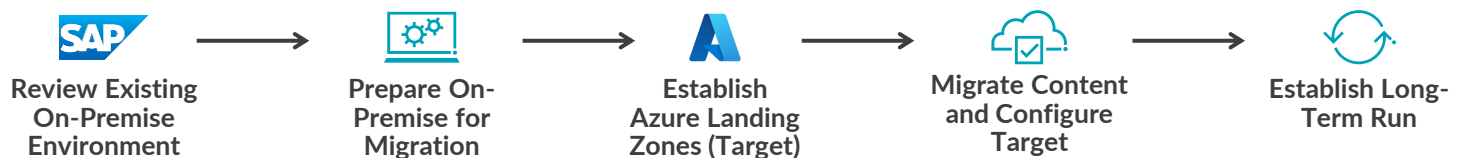

Success Story: A global battery manufacturer found themselves with multiple reporting platforms, methods of working, and Data Ops. The organization implemented a full-stack Azure analytics environment, resulting in increased development agility, modernized end-user experience and self-service reporting with PowerBI. In three months, 42 InsightViews were installed, loaded, tested and customized to fit the client's business processes and managerial regulatory reporting needs, providing immediate value across business domains and jump-starting the transformation efforts.

SAP HANA → **Azure Synapse Pipeline** → **Azure Data Lake Storage** → **Azure Synapse Analytics** → **Power BI**

SAP Business Objects Platform

About SAP BusinessObjects Platform: The SAP BusinessObjects Platform capitalizes on the need to move over 68,000 SAP BusinessObjects Platforms, including Data Services and Info Steward environments, from on-premise to Azure. Protiviti's advanced set of acceleration tools and scripts enables the establishment of a cloud environment in a streamlined and reliable manner. Our processes facilitate the movement of on-premise reports and content to the cloud.

Success Story: A national food company had the SAP BusinessObjects Platform installed on-premise and wanted to simplify the architecture while reducing operating costs by migrating to Azure cloud. They lacked resources with the knowledge to upgrade and migrate SAP BusinessObjects, so they called in Protiviti to deploy advanced acceleration tools and scripts that established the Azure environment in a streamlined and reliable manner. Now the client enjoys access to an optimized SAP BusinessObjects environment with a simplified architecture that is managed by Protiviti's Managed Services Team.

Review Existing On-Premise Environment → **Prepare On-Premise for Migration** → **Establish Azure Landing Zones (Target)** → **Migrate Content and Configure Target** → **Establish Long-Term Run**
